

Mental health problems are world wide problems and have received more and more attention in recent years. In our visualization project, we show the current situations of different types of mental disorders in each country, the relationships between the number of cases with different types of mental disorders, and the relationship between the number of disorder cases and some governance or economic factors.

Overview of world wide mental health problems

Pie chart: Composition of mental health disorders in each country (2017)

Correlation Matrix: Relationships between the number of cases with different types of mental disorders

Relationship between two selected elements, with a trend line

Scatter: Relationship between the selected mental disorder and governance factor

Map: Situations of different types of mental disorders in each country in the selected year

Word Cloud: Comparison between countries on selected type of mental disorder
